## The new LV-67S embedded system board, based on the Intel 6th Generation Skylake processor

Extending its [Mini-ITX](#) format industrial grade embedded board portfolio again, we are announcing the [LV-67S](#), which offers a 30% performance improvement and power reduction over Ivy Bridge based units. The LV-67S is aimed at graphics-rich, heavy computing environments where low power consumption is also a primary requirement for fanless operation in kiosks and similar environments...
